CONTENTS

CHAPTER 1 PHYSICAL DATA

1.1 Basic Radiometric Quantities and Units 1

1.2 Sources of Radiant Energy 1

1.2.1 The Sun and Daylight 4
1.2.2 Thermal Radiators 11
1.2.3 Electric Discharge Lamps 19
1.2.4 Electroluminescent Sources 23
1.2.5 Light-Emitting Diodes 25
1.2.6 Lasers 25
1.2.7 Sources of Ultraviolet Radiant Energy 27
1.2.8 Some Photometric and Colorimetric Characteristics of Sources of Radiant Energy 27

1.3 Optical Filters 30

1.3.1 Absorption Filters 30
1.3.2 Glass Filters 34
1.3.3 Gelatin Filters 35
1.3.4 Liquid Filters 35
1.3.5 Absorption Filters for Special Applications 35
1.3.6 Miscellaneous Absorption Filters 40
1.3.7 Interference Filters 40
1.3.8 Interference-Filter Wedges 46
1.3.9 Beamsplitters 48
1.3.10 Sheet Polarizers 49
1.3.11 Miscellaneous Optical Filters 51

1.4 Reflecting Materials 51

1.4.1 Front-Surface Mirrors 55
1.4.2 White Reflectance Standards 55
1.4.3 Colored Reflectance Standards 58
1.4.4 Black Surfaces 60
1.4.5 Building Materials 60
1.4.6 Natural Objects 60

1.5 Monochromators 63

1.5.1 Basic Designs of Monochromators 63
1.5.2 Resolving Power and Transmitted Radiant Flux 66
1.5.3 Slit-Width Correction 69
1.5.4 Polarization 70
1.5.5 Wavelength Calibration 71
1.5.6 Stray Light 72

1.6 Physical Detectors of Radiant Energy 72

1.6.1 Thermal Detectors 73
1.6.2 Photon Detectors 76

CHAPTER 2 THE EYE

2.1 Preamble 83

2.2 The Structure of the Human Eye 83

2.2.1 Cornea 84
2.2.2 Lens 84
2.2.3 Aqueous Humor and Vitreous Body 84
2.2.4 The Fine-Structure of the Retina 85
2.2.5 Main Topographical Features of the Retina 88
2.2.6 The Fovea 90
2.2.7 The Photoreceptors 90

2.3 Specification of the External Stimulus 93

2.3.1 Position in External Field 93
2.3.2 Radiometric Specification 93
2.3.3 Photometric Specification 95

2.4 Factors in the Eye That Control the Internal Stimulus 95

2.4.1 Image Formation by the Theoretical Eye 98
2.4.2 Eye Axes and Eye Angles 100
2.4.3 Chromatic Aberration of the Eye 101
2.4.4 The Troland Values of Retinal Illuminance 102
2.4.5 Pupil Size 105
2.4.6 Light Losses in the Eye 107
2.4.7 Fluorescent Light in the Eye 116

CHAPTER 3 COLORIMETRY

3.1 Preamble 117

3.2 Basic Colorimetric Concepts 117

3.2.1 Trichromatic Generalization 117
3.2.2 Tristimulus Space 119
3.2.3 Basic Colorimetric Equations 121
3.2.4 Imaginary Color Stimuli 127
3.2.5 Colorimetric Transformations 129

3.3 The CIE Colorimetric System 130

3.3.1 The CIE 1931 Standard Colorimetric Observer 131
3.3.2 The CIE 1964 Supplementary Standard Colorimetric Observer . 132
3.3.3 Development of the Two CIE Standard Observers 133
3.3.4 CIE Standard Illuminants 143
3.3.5 CIE Standard Sources 146
3.3.6 Standard of Reflectance Factor 155
3.3.7 Standard Illuminating and Viewing Conditions 155
3.3.8 Calculation of CIE Tristimulus Values and Chromaticity Coordinates 156
3.3.9 CIE Uniform Color Spaces and Color-Difference Formulae . . . 164
3.3.10 CIE Metamerism Index for Change in Illuminant 169
3.3.11 CIE Color-Rendering Index 173

3.4 Dominant Wavelength, Excitation Purity, and Colorimetric Purity 175

3.5 Complementary Color Stimuli 176

3.6 Maximum Attainable Luminous Efficiency of Color Stimuli of Different Chromaticity 177

3.7 Optimal Object-Color Stimuli 179

3.8 Metameric Color Stimuli 183

3.8.1 Definition of Metamerism 184
3.8.2 Methods of Generating Metamers 185
3.8.3 Intersections of Spectral Reflectance Curves of Metamers 194
3.8.4 Counting Metamers 196
3.8.5 Boundaries of Mismatches of Metamers 200
3.8.6 Application of Linear Programming to Miscellaneous Colorimetric Problems 212

3.9 Colorant Formulation 221

3.10 Specification of Color Tolerances 222

3.11 Distribution Temperature, Color Temperature, and Correlated Color Temperature 224

3.12 Colorimetric Instrumentation 228

3.12.1 Spectroradiometers 229
3.12.2 Spectrophotometers 232
3.12.3 Spectrophotometry of Fluorescent Materials 235
3.12.4 Propagation of Random Spectrophotometric Errors 240
3.12.5 Tristimulus-Filter Colorimeters 243

CHAPTER 4 PHOTOMETRY

4.1 Basic Photometric Quantities and Units 249

4.2 The Photometric Principle 249

4.3 The Standard Photometric System 253

4.3.1 Historical Note 253
4.3.2 Standard Photometric Observers 256
4.3.3 Photometric Methods 259
4.3.4 Measurement of Total Luminous Flux 263
4.3.5 Measurement of Luminous Intensity and Illuminance 265
4.3.6 Measurement of Luminance 270

4.4 Calculation of Illuminance Produced by Lambert Sources of Different Shapes 277

CHAPTER 5 VISUAL EQUIVALENCE AND VISUAL MATCHING

5.1 Preamble 278

5.2 Classification of Matching Procedures 278

5.2.1 Visual Equivalence and Visual Match by Strict Substitution . . . 279
5.2.2 Asymmetric Comparison and Matching; Quasi-symmetric Matching 281
5.2.3 Limited Groups of Asymmetric Matching Procedures 283
5.2.4 Matching Criteria 285
5.2.5 Some Particular Matching or Equivalence Procedures 288

5.3 Maxwell's Method of Color Matching 293

5.3.1 Historical Note 293
5.3.2 Basis of Maxwellian Trichromacy 294
5.3.3 Maxwell Trichromacy and Full Trichromacy in Quasi-Symmetric Matching 298
5.3.4 Maxwell's Method in Nontrichromatic Matching 300
5.3.5 Maxwellian Matching as Correlation of Stimulus Spaces 302
5.3.6 Maxwellian Matching in the Weaker Sense 304

5.4 Precision of Color Matching for Normal Trichromats 306

5.4.1 MacAdam Ellipses 306
5.4.2 Brown–MacAdam Ellipsoids 313
5.4.3 Wyszecki–Fielder Ellipsoids 319
5.4.4 Repeatability of Color-Matching Ellipsoids for the Same Observer 320
5.4.5 Intercomparison of Color-Matching Ellipses for Different Observers 323
5.4.6 Propagation of Random Errors in Colorimetric Transformations 328

5.5 Color-Matching Functions of Normal Trichromats 330

5.5.1 Two-Degree Data of Guild and Wright 330
5.5.2 Judd Modification 330
5.5.3 Stiles Two-Degree Pilot Data 333
5.5.4 Stiles–Burch Ten-Degree Data 333
5.5.5 ETL Ten-Degree Data 343
5.5.6 Variations of Color-Matching Functions of Different Normal Trichromats 346

5.6 Factors Modifying Color Matching 347

5.6.1 Filter Pigments in the Eye 347
5.6.2 Rod Participation 354
5.6.3 Location of Visual Field 372
5.6.4 Size of Visual Field 373
5.6.5 High Luminance Level 374
5.6.6 Maxwell Method versus Maximum-Saturation Method 379

5.7 Luminous Efficiency Functions of Normal Trichromats 392

5.7.1 Matching or Equivalence Criteria and Experimental Procedures 392
5.7.2 Experimental Data 394

5.8 Heterochromatic Brightness Matching of Complex Stimuli 410

5.8.1 Luminance of Equally Bright Color Stimuli 411
5.8.2 Additivity Failures 413

5.9 Abney and Bezold–Brücke Effects 420

5.10 Hue Reversals: Brindley Isochromes 424

5.11 Stiles–Crawford Effect 424

5.12 Chromatic Adaptation 429

5.12.1 Asymmetric Matching—Basic Concepts 429
5.12.2 Experimental Procedures and Data 432
5.12.3 A Comparison of Chromatic-Adaptation Transforms 449

5.13 Chromatic-Response Functions 451

5.14 Color-Matching Properties of Color-Defective Observers 458

5.14.1 Normal and Anomalous Trichromats 459
5.14.2 Dichromats 463
5.14.3 Monochromats 471

5.15 Instrumentation for Color-Vision Research 472

5.15.1 Maxwellian View 478
5.15.2 Measurement of Directional Sensitivity and Increment Thresholds 483
5.15.3 The Staircase Methods 484

CHAPTER 6 UNIFORM COLOR SCALES

6.1 Preamble 486

6.2 Types of Scales and Scaling Methods 488

6.3 Brightness and Lightness Scales 493

6.4 Color Scales of Constant Lightness 500

6.5 Three-Dimensional Color Scales 503

6.5.1 Principles of Construction 503
6.5.2 Color-Difference Formulae 504
6.5.3 White. Whiteness Formulae 506

6.6 Color-Order Systems 506

6.6.1 Munsell Color System 507
6.6.2 DIN Color System 509
6.6.3 Swedish Natural Color System 511
6.6.4 OSA Color System 512

CHAPTER 7 VISUAL THRESHOLDS

7.1 Preamble 514

7.2 General Concepts 514

7.2.1 Basic Terms and Definitions 514
7.2.2 Quantum Fluctuations and Visual Stimuli 516

7.3 Dark Adaptation and Absolute Thresholds 519

7.3.1 Recovery of Threshold Sensitivity; Dark-Adaptation Curves . . 519
7.3.2 Threshold Variation Over the Visual Field 521
7.3.3 Threshold Sensitivity of Fully Dark-Adapted Eye 521
7.3.4 Absolute Threshold Values for Different Conditions of Measurement 521

7.4 Chromatic Adaptation and Increment Thresholds 525

7.4.1 Two-Color Threshold Method 525
7.4.2 Basic Formulae 528
7.4.3 Stiles' Mean Data 531
7.4.4 Specific Aspects of π Mechanisms and Later Developments . . . 537

7.5 Rod Saturation 544

7.6 Cone Saturation 547

7.7 Rod and Cone Interactions 549

7.8 Uniform Equivalent Fields 552

7.8.1 Basic Formulae 553

7.9 Spatial and Temporal Factors 554

7.9.1 Distinctness of Border 555
7.9.2 Mach Bands 556
7.9.3 Flicker 557

7.10 Discrimination Thresholds 567

7.10.1 Luminance Differences 567
7.10.2 Wavelength Differences 570
7.10.3 Purity Differences 571

7.10.4 Color-Temperature Differences 574
7.10.5 Chromaticity Differences 575
7.10.6 Color-Difference Matches 576

CHAPTER 8 THEORIES AND MODELS OF COLOR VISION

8.1 Preamble 582

8.2 Visual Response Functions and the Spectral Properties of Visual Pigments 586

8.2.1 Principle of Univariance 586
8.2.2 The Visual-Pigment Layer 588
8.2.3 Dartnall's Standard Shape of Visual Pigment-Absorption Coefficient 591
8.2.4 Color-Matching Data and the Spectral Absorption Curves of Visual Pigments 591
8.2.5 Dichromatism and the Fundamental Spectral Sensitivities 604
8.2.6 Color-Matching Data and the Pigment-Bleaching Model 619

8.3 Neural Models 633

8.3.1 Müller and Judd 634
8.3.2 Adams 639
8.3.3 Hurvich and Jameson 642
8.3.4 Guth 646
8.3.5 Ingling 652

8.4 Line Elements of Color Space 654

8.4.1 Basic Concepts 654
8.4.2 Helmholtz 658
8.4.3 Schrödinger 659
8.4.4 Stiles 660
8.4.5 Trabka 672
8.4.6 Vos and Walraven 673
8.4.7 General Construction of Inductive Line Elements 677
